## Módulo GetProxy

Módulo para trabajar con proxies.

**1. GetProxy List:** Obtiene una lista de proxies desde distintos servidores.

- **Proxy List:** Lista de servidores
- **Variable:** Variable donde se guardará el resultado. No debes usar llaves {}

The screenshot shows the 'Robot: GetProxy' configuration window. At the top, there's a title bar with 'Robot: GetProxy' and a close button. Below the title bar, there's a toolbar with two buttons: 'GetProxy List' (highlighted with a red box) and 'GetProxy'. To the right of these buttons are four icons: a Linux penguin, an Apple logo, a Windows logo, and a Docker logo. Below the toolbar, there's a light blue banner with a question mark icon and the text 'Get prxy list for many server'. Underneath, there's a section titled 'Proxy List' with a dropdown menu showing 'https://www.sslproxies.org/'. Below that, there's a section titled 'Variables' with a text input field containing 'proxy'. At the bottom of the 'Variables' section, there's a small text note: 'Nombres de variables sin {} y separadas por coma'. At the very bottom of the window, there are two buttons: 'Aceptar' (Accept) and 'Cancelar' (Cancel).
